DETAILED ACTION

This office is in response to remarks and amendments filed July 22, 2010. Claims 1, 4, 5, 7-9, 12, 13 and 16 are pending.

Drawings

The drawings submitted on August 11, 2006 are acceptable.

Response to Arguments

Applicant's arguments submitted have been fully considered. Applicant submitted amendments and previous rejection has been withdrawn.

Allowable Subject Matter

Claims 1, 4, 5, 7-9, 12, 13 and 16 are allowed over prior arts.

The above mentioned claims are allowable over prior arts because the CPA (Cited Prior Art) of record fails to teach or render obvious the claimed limitations in combination with the specific added limitations, as recited in independent claims and subsequent dependent claims.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to a key distribution method in next generation network that involves utilizing softswitch for authenticating user terminal. A registration request message is sent from a terminal to a soft switch. An authentication request message is sent to the

authentication center from the softswitch. The session key is distributed of the terminal by the softswitch after the authentication center authenticates the terminal and the registration authentication is passed.

Thus, the cited prior art does not explicitly teach or suggest a key distribution method applied in the Next Generation Network comprising a terminal, a soft switch and an authentication center, comprising:

the terminal sending a registration request message to the soft switch for a registration;

the soft switch sending an authentication request message to the authentication center for the authentication for the terminal; and

the authentication center authenticating the terminal, generating a session key for the terminal and the softswitch, and sending the session key to the soft switch, so as to be distributed to the terminal upon a successful authentication;

wherein the step of the authentication center authenticating the terminal comprises: the authentication center generating a first verification word for the terminal according to a key Kc shared with the terminal, encrypting the session key with the shared key Kc, and returning the encrypted session key and the first verification word to the soft switch;

the soft switch returning a registration failure response message to the terminal to notify the terminal of a registration failure;

the terminal generating a second verification word according to the key Kc shared with the authentication center, and sending a registration message containing the second verification word to the soft switch for a registration again; and

the soft switch authenticating the terminal according to the first verification word and the second verification word;

wherein the step of the soft switch distributing the session key to the terminal comprises;

the soft switch returning to the terminal a registration success response message containing the session key encrypted with the shared key Kc. and sending a terminal authentication success message to the authentication center; and

the terminal decrypting the session key encrypted by the authentication center according to the shared key Kc.

The examiner has found that the prior art of record does not appear to teach or suggest or render obvious the claimed limitations in combination with the specific added limitations as recited in independent claims and subsequent dependent claims. The prior art of record fails to teach or suggest a system and method as mentioned above.

An updated search did not reveal any prior art that would anticipate or make obvious the currently claimed invention.

1. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
